

NetMRI™ Automated Next-Generation Management

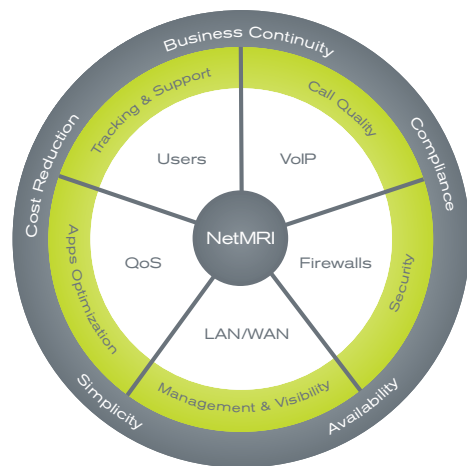

A Single Solution to Solve Your Most Demanding Challenges

Save Time and Money—While Taking Your Network Further

NetMRI from Netcordia is the only multi-vendor management solution with the built-in analysis engine to help optimize performance and enhance security across your entire network infrastructure—regardless of vendor. A dynamic complement to traditional network management systems, the NetMRI solution enables IT staff to identify and solve potential network issues with routing, subnets, VoIP, VLANs, and multiple other areas quickly and simply—before they become problems.

Built-in Expert Analysis in a Single Platform

The real value of NetMRI is its ability to perform deep analysis and find hidden and harmful problems.

NetMRI takes configuration, performance, security, compliance, and change into consideration when performing its analysis—because all of these issues are related.

It utilizes built-in expert rules to ensure compliance and detection of problems by assessing, auditing, and making improvements mapped against industry best practices.

Manage Configuration, Performance, Security, and Compliance

While other tools concentrate on a particular capability, NetMRI takes configuration, performance, security, compliance, and change into consideration when performing analysis—because Netcordia understands that all of these issues are related. With NetMRI, you can be sure that many network problems will be identified and corrected early.

Scorecard Provides At-a-Glance and In-depth Analysis

The information presented in NetMRI starts with a high-level Scorecard showing you how the network is performing overall. The prominent, single number tells you right away the health or severity of a network issue. With a single click, you can then drill down to in-depth detail and analysis.

Correct Configuration Problems, Report on Changes

NetMRI is not just a solution for collecting data. It can also make changes based on your requirements or corporate policy. Simply set up NetMRI with your own policy guidelines and it will automatically

Features and Benefits

- Helps fully automate standard network management functions
- Provides compliance checks and enforcement
- Allows you to create custom rules for detecting and correcting network anomalies
- Detects issues for a range of technologies and applications, including routing, subnets, VoIP and VLANs
- Monitors environmental conditions relating to temperature, fans, power, and voltage
- Provides for global and/or route table transitions, viewed network-wide
- Supports a range of routing protocols, including BGP, OSPF, and E-IGRP
- Scales easily to support networks from 200 to 20,000 network devices

Netcordia™
Simply a better way to manage

report on devices that are out of policy, and even take corrective actions—saving you significant time and money.

Ease of Use and Deployment

NetMRI can be installed in less than 30 minutes and deliver in-depth network information within 24 hours. Designed to be intuitive and easy to use, NetMRI requires little or no training to get started. In addition, all analysis and information is available via a web browser, making it accessible from almost anywhere.

NetMRI Operations Center

As part of the NetMRI family, the NetMRI Operations Center creates a unified system for analyzing and

troubleshooting enterprise networks, delivering flexible reporting across a vast number of network elements. The Operations Center scales the NetMRI solution from 2,000 devices to as many as 20,000 devices by aggregating information from up to 40 NetMRIs, including devices, interfaces, neighbors, VLANs, subnets, and inventory.

NetMRI Technology Modules

The NetMRI technology add-on modules allow you to expand the NetMRI capabilities based on specific technology needs. Whether it is the management of IP Telephony, Quality of Service, or policy management, the same core NetMRI expert analysis and functionality are delivered across these additional technologies.

Technical Specifications

NetMRI Campus

- Single processor, portable or rack-mount
- 200 network devices
- 5,000 interfaces

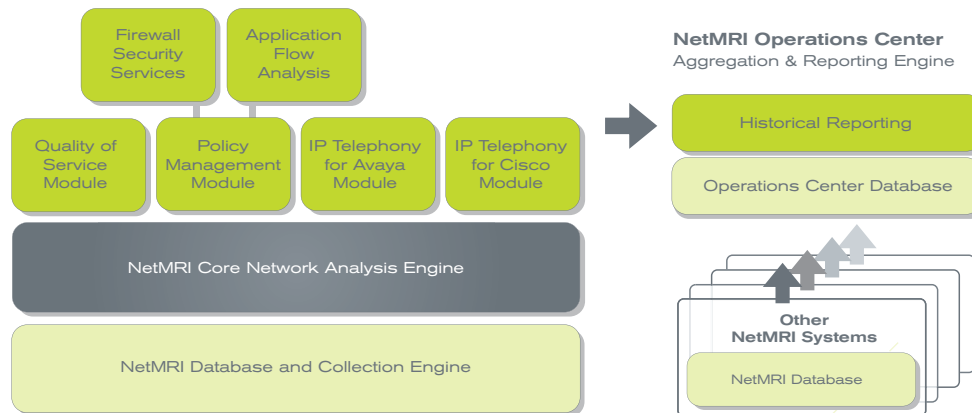

NetMRI Enterprise

- Dual-processor, rack-mount
- 200 to 2,000 network devices
- 50,000 interfaces

NetMRI Operations Center

- Dual-processor, rack-mount
- 20,000 routers and switches
- 500,000 interfaces
- Data aggregation of up to 40 NetMRI systems

NetMRI Core & Modules

Flexible and adaptable, Netcordia solutions are designed to work together flawlessly. Install only the modules that your organization needs.
